

LIST OF TABLES

Table 2.1	Description of iris-based recognition for unconstrained environment, relevant techniques, its advantages, and limitations	22
Table 2.2	Different segmentation technique used in literature	26
Table 2.3	Different sclera vein enhancement technique used in literature	28
Table 2.4	Description of sclera-based recognition for unconstrained environment, relevant techniques, its advantages, and limitation	32
Table 2.5	Summary of sclera based multimodal biometrics systems	35
Table 5.1	UBIRIS.v2, MMU and MICHE database configurations	96
Table 5.2	Performance analysis of existing ANFIS and KNN segmentation methods with proposed iris segmentation method	101
Table5.3	Comparison analysis of proposed sclera technique in terms of different performance measures	103
Table 5.4	Comparison analysis of proposed pupil segmentation method in terms of different performance measures	104
Table 5.5	Entropy values for MMU database images	108
Table 5.6	Entropy values for UBIRIS.v2 Database images	109
Table 5.7	Entropy values for MICHE Database images	110
Table 5.8	Comparison of Colour, Texture and Y-shaped Feature vectors values with classification and recognition accuracy for MMU database images	111
Table 5.9	Comparison of Colour, Texture and Y-shaped Feature vectors values with classification and recognition accuracy for UBIRIS.v2 database images	112
Table 5.10	Comparison of Colour, Texture and Y-shaped Feature vectors values with classification and recognition accuracy for MICHE database images	113
Table 5.11	Comparison review of the proposed approach with various MMU database performance measures	115

Table 5.12	Comparison review of the proposed method for UBIRIS.v2 database with respect to different performance measures	115
Table 5.13	The proposed method comparison analysis for the different MICHE database output measurements	115
Table 5.14	Performance comparisons in terms of classification accuracy with different methods	120
Table 5.15	Performance comparisons in terms of segmentation accuracy with different methods	121
Table 5.16	Performance comparisons in terms of average computation times (in seconds) with different segmentation methods	122
Table 5.17	Performance analysis for efficient multimodal eye biometric recognition system with existing system	122
